

Move the Right Data To VMware Cloud on AWS

Moving the Right Data Can Be Challenging

- Data is more than doubling every two years, while IT budgets stay flat
- 70%+ of data is cold, yet it is managed on expensive primary storage
- IT organizations lack visibility across their storage silos
- Leveraging the cloud can cut costs, but only if you know what data to move
- Moving data across storage silos can disrupt existing users and critical applications

Komprise Identifies and Moves the Right Data to VMware Cloud on AWS

- Identifies hot and cold data across your network attached storage
- Projects the ROI of moving your data to cloud based storage
- Moves your data while preserving file-based access
- All with no changes or disruption to your users or applications

Komprise Delivers

Intelligence

Analyzes and in 15 minutes shows how your data is growing, and how much you save with the cloud

Transparency

Moves data without agents, stubs, or any changes to file-based access

Scalability

Scales as virtual machines on-demand with no dedicated infrastructure or bottlenecks

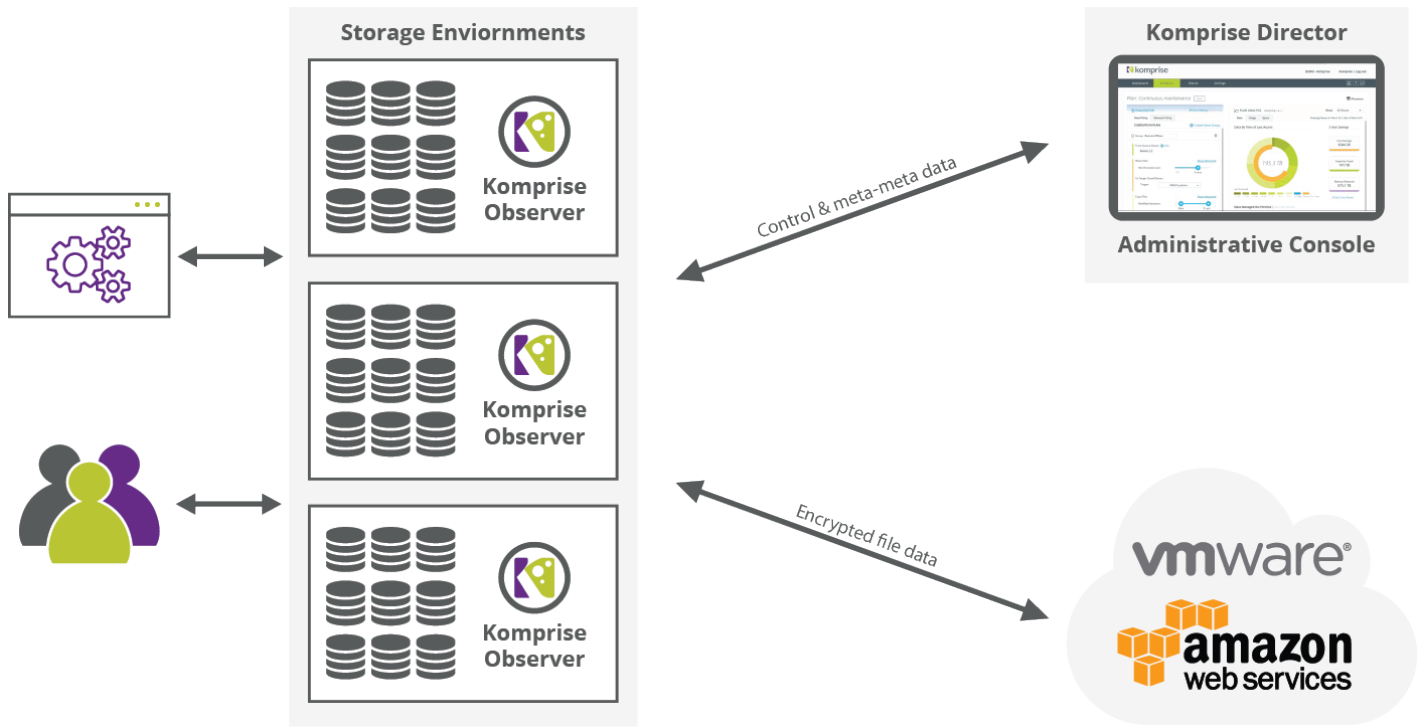

Cost Savings

Cuts 70%+ of costs by moving cold data to secondary storage solutions like VMware Cloud on AWS

Komprise Scale Out Architecture Handles Massive Data Growth

Data management has been hard to adopt and does not scale to meet today's massive data growth. Komprise software utilizes a shared-nothing grid architecture that grows on demand to handle today's massive scale of data with intelligent automation.

The Komprise Difference	How it impacts you
No hardware to deploy	Simple 15 minute setup with no upfront costs
No storage agents	Works across all your storage via standards (NFS, SMB/CIFS, REST/S3)
No stubs	User and application access unchanged
No impact on hot data path	Performance is same or even better
No scaling limits	Seamless to scale on-demand
No silos	See data usage and growth across all your storage
No lock-in	Native access to moved data
No costly licenses	With sub-cloud pricing, save 70%+ on every terabyte
No complex configurations	Adapts to your environment and runs invisibly so you can get your weekends back
