

Accelerate Cloud Migration to Azure NetApp Files

Fast, Reliable, Efficient Data Migration with Komprise

Cloud migrations do not have to be risky, time-consuming, expensive, and laborious. With Komprise, you can quickly identify just the right data that needs the performance of Azure NetApp Files (ANF), and either migrate entire data sets or just the hot data to ANF. The best part is that in either case, users and applications see no disruption.

Visibility for Smarter Data Decisions

Get valuable data analytics by simply pointing Komprise at your NFS and SMB storage, and within 15 minutes you can:

- Understand data growth and usage across all your storage.
- Find the right data across multi-vendor NAS to be moved to ANF *before you migrate*.
- Set policies to tier cold data files as they age.

Faster, Reliable Migrations with MD5 Checksums

Make migrations faster, more accurate, and cost effective.

- Komprise Elastic Data Migration maximizes performance by using parallelism at every level.
- Manage hundreds of migrations through an intuitive UI and API.
- Migrate petabytes reliably with MD5 checksum on every file.

Intelligent tiering through transparent archiving

Cut 70% of cold data costs without any change to user access.

- Tier and archive cold files in ANF transparently
- Cold files stop consuming expensive storage and backup resources, but they still appear in the original location, so users see no change.
- Active data and control paths are unchanged, ensuring hot data access is unaffected.

Key Features

Analytics Driven

Analyze and identify just the data to migrate across your NAS storage.

Fast, Reliable Migrations

Maximize efficiency, speed, and reliability with elastic solution.

No Proprietary Stubs, Agents, or Lock-in

Komprise migrates and archives using open standards, so data can be used from original storage or the cloud—without rehydration.

Optimize Cloud Costs

Maximize savings by sending hot data to ANF and cold data to the cloud for cost management without surprises or overruns.

Copy Data to Azure for AI and ML Projects

Leverage Azure resources for AI and Big Data by using Komprise Deep Analytics to search and copy just the data you need across all your storage.

Komprise / Azure NetApp Files Architecture

Komprise is simple to deploy and scale with an elastic scale-out software architecture that grows on demand so you can handle today's massive scale of data. Komprise is built without bottlenecks, agents, stubs, or central servers that limit scalability or cause a single point of failure. As your data grows, simply add more virtual appliances to easily scale on demand. As a partner of both NetApp and Azure, Komprise provides a simple, robust, efficient solution to migrate and manage data on Azure.
